Introduction

Remember enterprise IT before cloud computing became the norm?

Let's paint the picture.

Tech teams were in a constant arms race to provide sufficient storage and computing power to keep up with their company's and users' needs.

The result? Large capital investments in physical real estate to house computers and servers coupled with ongoing maintenance and expansion to support growth.

Demand planning was near impossible. Underestimate your needs, and you fall short on speed and user experience, while overestimating meant unnecessarily high costs that hindered profit margins.

Luckily, these struggles are things of the past.

Today's technology companies leverage cloud computing providers. It's simple: a company uses a cloud computing provider, like Amazon Web Services, and it gets instant access to elastically-scalable computing and storage capacity.

This means the provider, seemingly by magic, scales up and down to provide exactly what you need, when you need it, without the unnecessary cost or complexity.

What does this have to do with supply chain?

Most supply chains—even in 2022—are still running like a 1990s IT stack. Just like how companies added additional real estate and servers as they grew in the 1990s, today's brands piece together disparate facilities and 3PLs as their needs increase.

Brands now rely on expensive, disconnected, and inflexible pieces to make up their supply chains, which slow growth, hinder customer experience, and create massive operational burdens.

Cloud Supply Chain is a paradigm shift for supply chains—enabling the same flexibility, scalability, and efficiency that cloud computing did for IT.

Imagine a fully-integrated, infinitely-elastic, and consistently-optimized supply chain, delivered as a scalable utility. Here's how Cloud Supply Chain is making this a reality.

- **Inefficient and Fragmented Systems Hinder Growth**

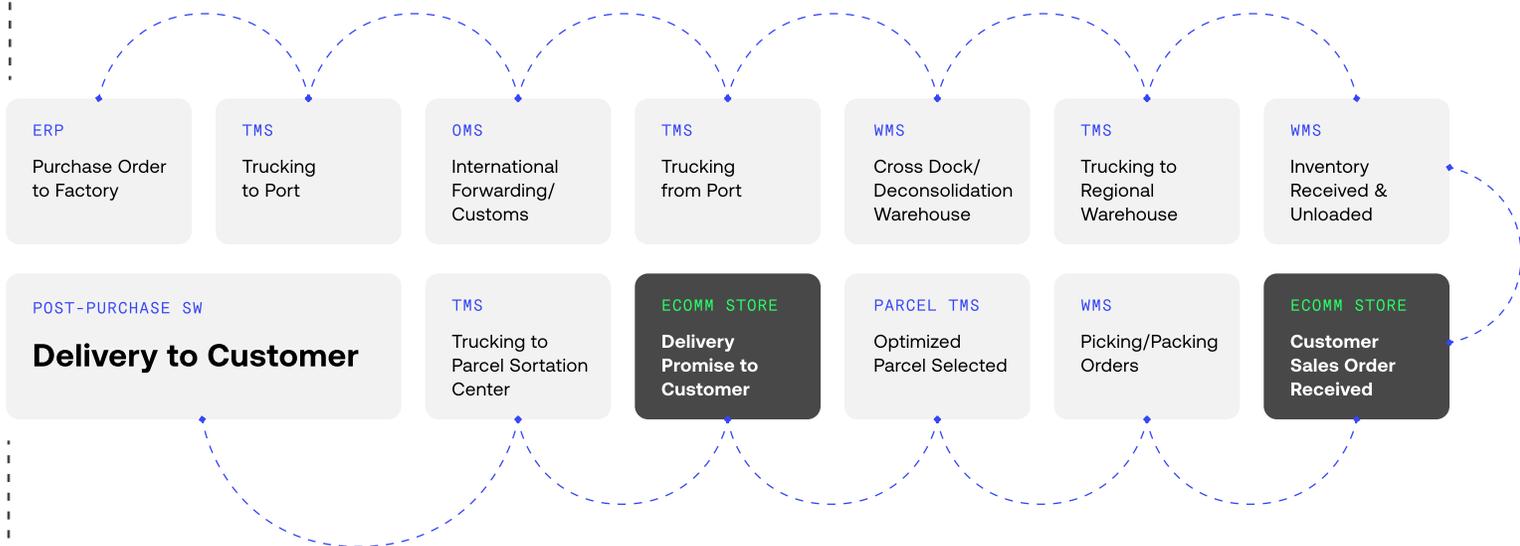

Inefficient and Fragmented Systems Hinder Growth

The main challenges for supply chains today center around the disconnected, disparate players at each point of operation. If a brand wants to scale or make changes, they're limited in how fast and how impactful they can be.

With rapidly-growing consumer demand and shifting preferences to favor omnichannel commerce, supply chains are under greater strain than ever. Brands have been forced to adjust their operations to keep up with these shifts, which were further accelerated by the COVID-19 pandemic.

In the absence of end-to-end, fully-connected solutions, most brands have been forced to rely on several partners and systems, each covering only a portion of their overall supply chains that are not built to work interoperably.

This fragmentation creates an intricate maze of interdependent, but often disconnected, operations. Failure at one point creates a ripple effect across the entire chain. With so many points of failure, brands expose themselves to significant risk. Meanwhile, optimization is near impossible. The cost of aggregating and analyzing all of the relevant data is massive. And even if you can do it, any practical optimization requires disassembling and then reassembling this complex maze. Too often the barriers are too great, and brands are forced to settle for cumbersome, under-optimized operations.

- **The Result of Today's Supply Chain Inefficiencies**

The Result of Today's Supply Chain Inefficiencies

Relying on a network of disparate systems creates a headache for brands. The outcomes are unappealing:

An out-of-control customer experience

When you don't have a complete, real-time picture of your supply chain, the experience you offer customers suffers.

This could look like:

- More out-of-stock messages on your website, because you couldn't track inventory properly
- Slow delivery times because product couldn't be located or was in the wrong fulfillment center
- Damaged goods, packaging, or a disappointing unboxing experience

Lack of flexibility and scalability

It's very hard to make changes to your current supply chain—you're typically locked into the systems and partners that you have.

So, what happens when demand or business needs change?

You lack flexibility and scalability in your supply chain to be able to:

- Scale up or down in specific regions
- Shift inventory and fulfillment processes to meet your needs, whether that's B2B, B2C, or omnichannel.

Can't optimize quickly

Brands need to be able to optimize their entire supply chain holistically. If the system is fragmented, changing one piece of the puzzle won't impact the rest of the chain—at least not fast enough to realize the desired benefit.

Difficult planning and high costs

Without an elastic supply chain, the cost of expanding operations to keep up with customer expectations and growth is incredibly expensive. In addition, it's difficult to plan and predict how those costs will change over time, since visibility is limited.

Let's Skip to the Good Part:

Cloud Supply Chain

Let's Skip to the Good Part: Cloud Supply Chain

The good news? With a modern Cloud Supply Chain approach, the problems brands face today go the way of floppy disks, tape recorders, and 1990s IT stacks.

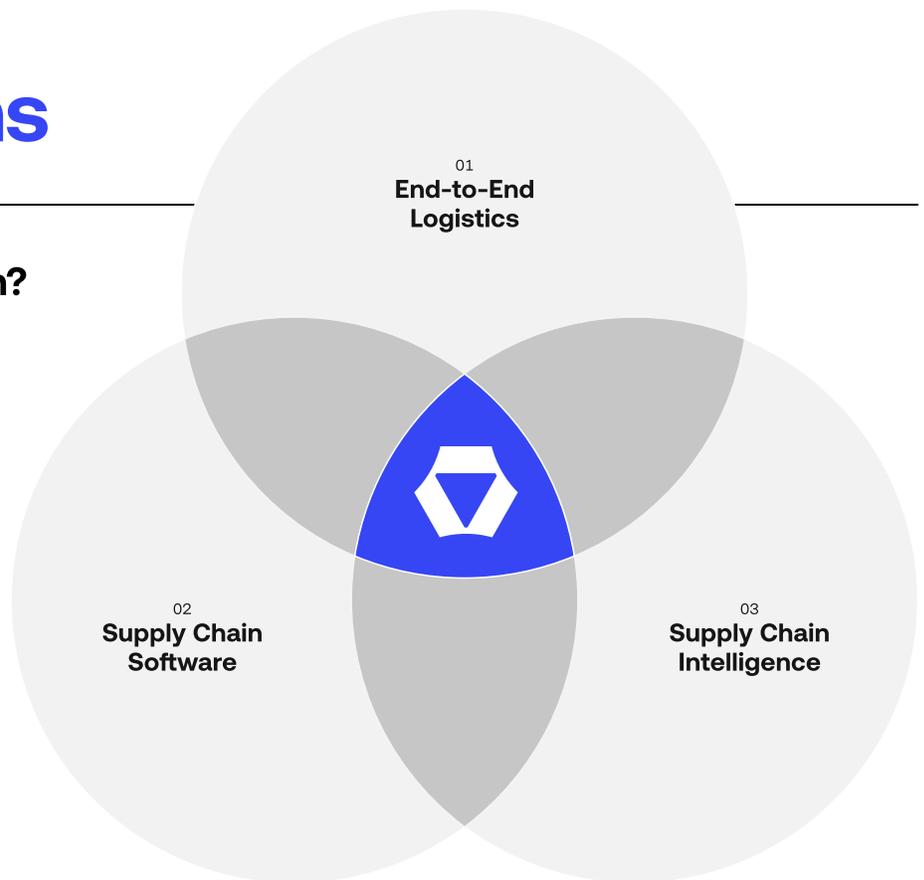

By partnering with a Cloud Supply Chain provider, you no longer have to think about scaling your logistics infrastructure to meet your growing needs or poring over Excel sheets to get a handle on inventory levels and facility performance—these issues become obsolete.

Cloud Supply Chain Solutions

So what is Cloud Supply Chain?

The traditional approach to logistics is dead. Cloud Supply Chain is the convergence of all the digital and physical tools you need to orchestrate, scale, and optimize your supply chain with the ease, speed, and flexibility of the cloud.

- 01** Complete port-to-porch logistics inclusive of transportation, warehousing, and fulfillment for B2B and B2C from one partner.
- 02** Integrated software that connects all of your logistics and systems in one place for easy management, total order and inventory visibility, and rapid optimization.
- 03** Hand-in-hand partnership with Stord's team of experts to make sure that your supply chain is a true competitive advantage including network analysis, training, and regular optimization.

How it Works

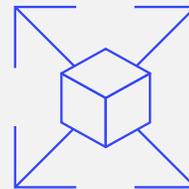

INTEGRATE WITH ONE PROVIDER, ONE TIME

GET FULL VISIBILITY ACROSS YOUR SUPPLY CHAIN

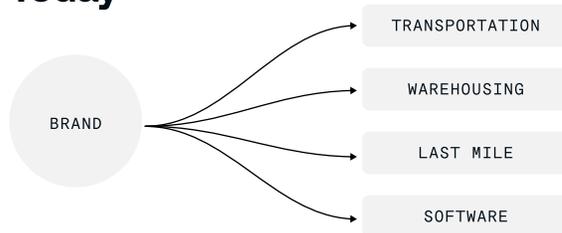

ACCESS ELASTIC LOGISTICS SERVICES THAT SCALE WITH YOU AS YOU GROW

FLEX AND OPTIMIZE YOUR PHYSICAL LOGISTICS WITH CLOUD-LIKE SPEED

- # The Benefits of Cloud Supply Chain

The Benefits of Cloud Supply Chain

Cloud Supply Chain enables:

- **Automatic flexibility and scalability that immediately ebbs and flows with your business**

Never interview another 3PL partner again. Instead, the right Cloud Supply Chain provider allows you to scale up or down, move inventory to appropriate regions, and automatically predict and respond to supply chain needs without a prerequisite headache. This is possible because of a fully-integrated, pre-vetted, hybrid network of over 1,000 warehouses and 20,000 shipping carriers that you can tap into without having to negotiate new contracts, establish new processes, or implement and integrate new systems.

- **Focus on customer and business outcomes, rather than logistics complexity**

With a single source of truth for a brand's entire supply chain, accessible wherever, whenever in the Cloud, businesses can manage their supply chain and optimize for customer experience and growth rather than worrying about individual integrations or site-level performance.

- **Deeper, seamless connectivity across the entire supply chain**

Stop thinking of your supply chain as the different vendors that each handle individual pieces of the chain and are held together by manual processes. Instead, view your supply chain as a single entity that will respond in unison to any changes or growth.

- **Greater optimization (and cost savings) for you**

When disparate systems are replaced with Cloud Supply Chain, true efficiency and optimization are realized. For example, you no longer need to pull reports from multiple different systems and partners to track inventory and orders. Instead, all of the data you need is in one place—making opportunities for optimization easier to uncover while saving you time and resources. The result? An improved experience (for brands, customers, and employees), lower costs, faster fulfillment with unmatched order accuracy, greater confidence as you grow, and more.

Beyond solving the supply chain challenges of today, Cloud Supply Chain helps businesses stay ahead of the challenges of tomorrow.

- Cloud Supply Chain lowers the cost and barriers of entry for brands, because it requires less capital to develop best-in-class supply chain operations.
- It also levels the playing field—helping all brands compete with logistical powerhouses like Amazon without needing decades of prep work and billions of dollars to deploy.
- Cloud Supply Chain transforms business' logistics from cumbersome cost centers to agile competitive advantages. When your supply chain performs with the speed, flexibility, and elasticity of the cloud, your customers are happier, your team is more confident, and you grow faster. Unlock your competitive advantage today.

About Stord

Stord offers freight, fulfillment, warehousing, packaging, and parcel / last mile delivery for B2C and B2B with the integrated software you need to orchestrate, scale, and optimize your entire supply chain.

For companies moving physical goods, Stord is the **cloud supply chain platform** that combines the **speed and flexibility of the cloud** with the **physical supply chain infrastructure** required to compete. Stord's cloud software connects to your existing systems with a single integration, providing an unmatched ability to analyze and optimize your entire supply chain, including inventory.

Stord's platform is backed by a first-party warehouse network that reaches 99% of the U.S. in 2 days or less, augmented by a premier partner network of thousands of facilities and transportation carriers available when and where you need capacity, ensuring orders are delivered on time and to the right place.

Who We Are

Stord is the pioneer of Cloud Supply Chain, enabling companies to compete and grow with world-class logistics – including warehousing, freight, fulfillment, packaging, and parcel / last mile delivery – in a single, integrated platform that's available exactly when and where they need it. Hundreds of B2B and B2C companies like Body Armor, Advanced AutoParts, and Dollar General use Stord to make their supply chains perform with the speed, flexibility, and ease of the cloud.

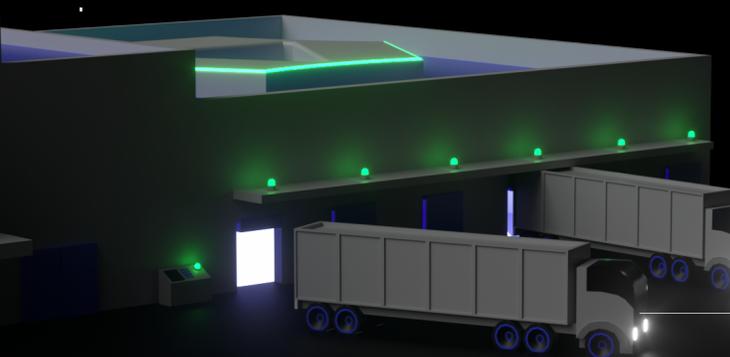

Led by former operators from Amazon, XPO, and Manhattan Associates, Stord is backed by Kleiner Perkins, BOND, Franklin Templeton, Founders Fund, Lux Capital, D1 Capital, Salesforce Ventures, Susa Ventures, and Lineage Logistics.
